## Converged Cellular & Satellite IoT Connectivity Offering

A new discovery offering, supporting you to relieve the pain of discontinuous and omitted data streams.

Deutsche Telekom IoT, in partnership with Intelsat, addresses global IoT connectivity challenges. The solution integrates cellular and satellite management, ensuring reliable, global connectivity for enterprises with critical operations. Simplifying management, it enhances quality and flexibility, overcoming unexpected coverage gaps.

Reliable, global coverage simply managed from *one* provider across the *entire* bandwidth spectrum.

Offering steadily extended with further satellite networks

Converged Product Base Package

CELLULAR PACKAGE

· 4G Connectivity
· 5 GB
· Public APN
· Teltonika Router
  + 3FF SIM Card
· Installation and Service included

SATELLITE PACKAGE

· Intelsat network
  (GEO satellites)
· 1 GB
· MIR[1] / CIR[2]: 1024 / 64 Kbps
· 1,2 m parabolic antenna, 3 W BUC
· Installation and Service included

CONTROLLER PACKAGE

· Connectivity Management
· API and Portal
· Global Usage Report

Coverage: Europe and North America   1) MIR = Maximum Information Rate   2) CIR = Committed Information Rate

A unique integrated offering, converging both cellular and satellite IoT connectivity seamlessly with single management control, combining service quality with reduced complexity.

· *One* contract — initially one year
· *One* delivery process — digital ordering
· *One* connectivity management platform
· *One* invoice
· *One* after-sales service

Telekom IoT is interested in engaging with companies wanting to jointly explore and expand product quality in all its aspects.
We onboard every new customer in a staged process, based on joint and transparent use case validation.
